Introduction

This booklet provides an analysis that is the result of the course AR2U080 at the Field Academy in Charlois, Rotterdam, a collaboration between the municipality of Rotterdam and the University of Technology in Delft.
The analysis is derived from hard and soft data, offering detailed insight on Charlois in both numbers and people, hereby developing a theoretical background on the area for further development.

The data was divided in 7 main categories. Subcategories of these were grouped in three scale levels, the city, the district and the neighbourhood.
A focus in analysis from themes rather than categories made research from multiple angles valid.
In the final scheme (as seen on the frontpage) the analysis results -cells- are defined by the categories -columns- and scales -rows-. The themes were maintained by icons as seen right, resulting in a final scheme where within connections were made between different elements of analysis that have influence on one another.

30 % of the inhabitants of Oud-Charlois work in the harbour or the periphery of Rotterdam.

'Going to work' is the most important reason for the people from Oud-Charlois to travel further than 10 km outside the neighborhood.

Besides going to work, the inhabitants of Oud-Charlois don't travel to far away.

ccessibility o t e istrict otter a roa net or

otter a city is encircle by a rin roa which defines its prime boundaries. A series o ain arteries ri e t e people to the inner city and districts. These numer ous series, as seen in the map, are quite dense, a fact which encourages that Rot terdam is a car based city. Furthermore there are 3 bridges and 2 tunnels that connect the two sides with each other. Regarding the accessibility to Charlois, it should be highlighted that part of the ring road creates its southern border. There are t o ain no es t at ri e cars into Charlois, as well as two secondary. From the city center, one can use the Maastun nel which leads directly to the area, but also the Erasmusbrug. From Charlois the ain arteries ea to t e nei borin districts and the centre.

Bus,Tram & Metro stop

Rotterdam public transport in relation to arlois

The public transportation system is spread throughout the whole city and is created by two metro lines, several tram and bus lines and the railway. Focusing in arlois istrict ar e it a blac contour) it is evident that Zuidplein area comprises a hub for the greater area as ost o t e local transportation lines pass from there (including the erasmus lijn-metro). The railway passes through the greater area making four stations, but there are bus lines connecting all four stations with the study area. Lastly, there are two tram lines passing through Charlois. As an overall feature the area is mostly well-connected with the southern districts, whereas the connection with the nort ern part is ostly reali e to reac larger nodes such as the railway stations.

For a big part of the inhabitants from Oud-Charlois, Zuidplein is the place for shopping and meeting each other, instead of the Lijnbaan in the city-centre.

There is also a low mobility outside the district for visiting relatives and for social recreation. The inhabitants stay mostly inside the neighborhood. There are some strong communities and relatives live in the neighborhood. This is, for instance, different than in Overschie.

Supermarket accessibility

The average walkable distance from a house to a supermarket is approximately 1000 meter. There are actually two supermarkets in Oud-Charlois; one in the north and one at the edge at the east of the neighborhood. They both cover the whole neighborhood. The maximum distance to walk home with two heavy bags would be 100 meter or less.

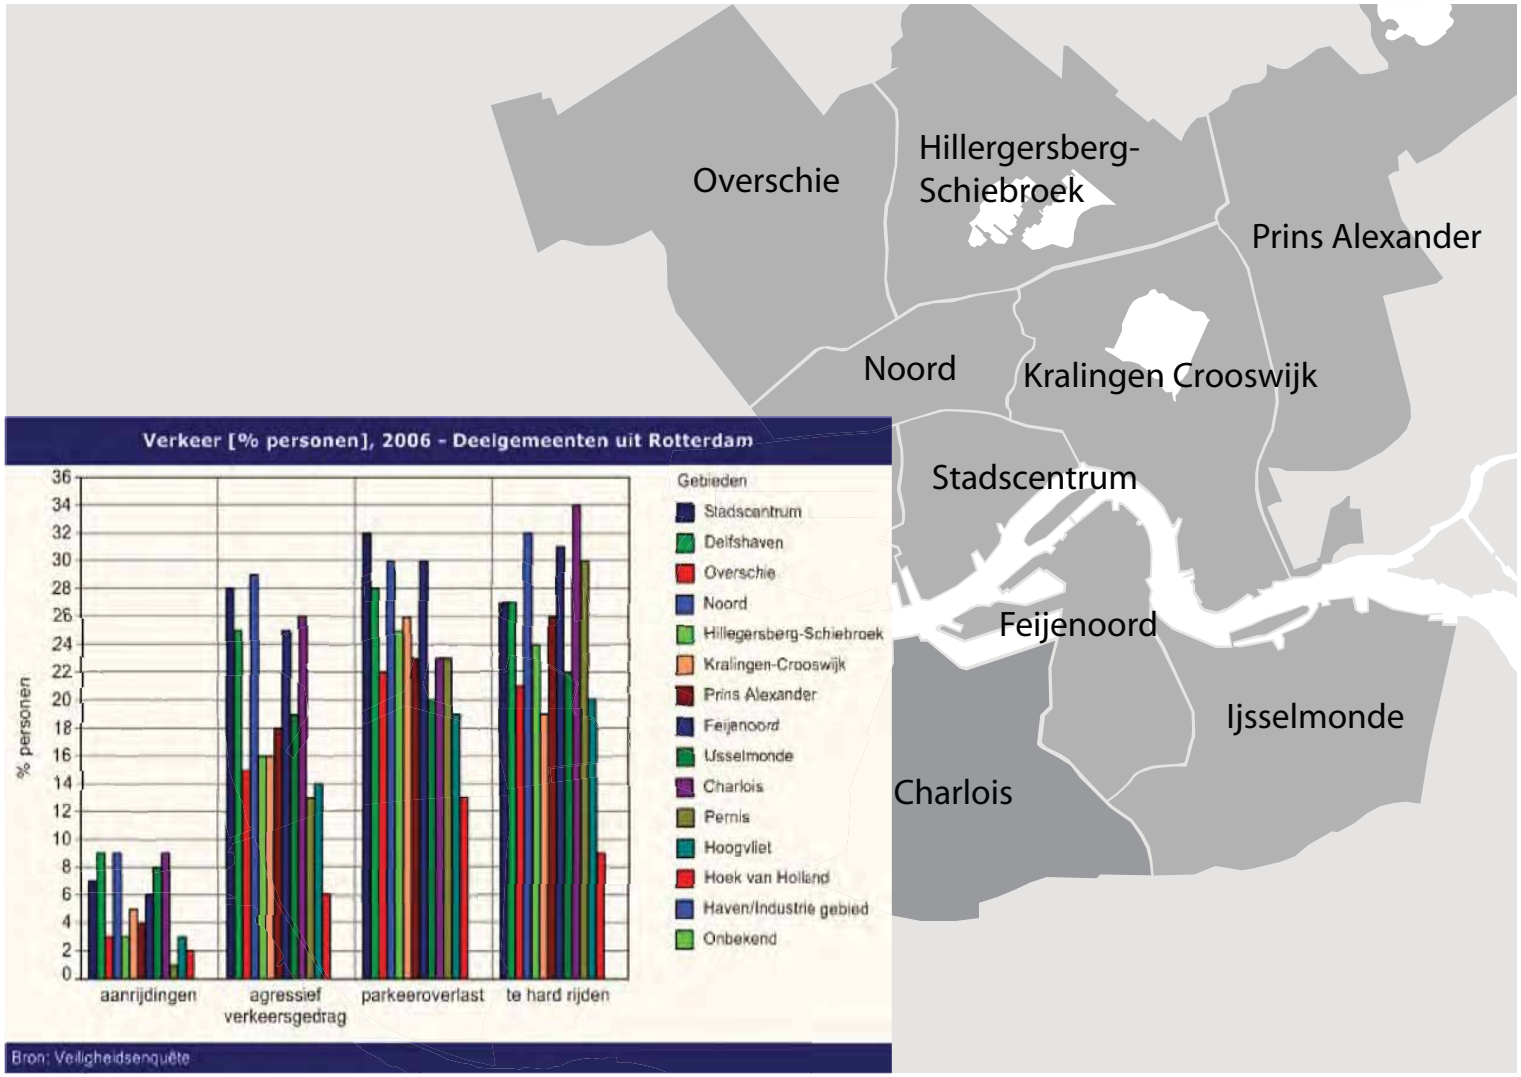
SAFETY

Rotterdam

Traffic safety



Comparing Charlois with the other districts in Rotterdam about traffic, one can notice that Charlois is in almost every subject above the average, which isn't very good.

- Charlois is in the top 3 of car accidents
- Charlois is in the top 3 of aggresive behaviour in traffic
- Charlois is in average with the parking problems
- Charlois is number 1 in driving to fast on the roads.

Intensity

Legend

- Very intensive
- Intensive
- Slightly intensive

As one can see there are quit some roads around and going through Charlois that are (very) intensive used.

Almost all the roads are 50 km/h roads, but people often drive a lot faster.

Because of the intensive use of the roads by cars and trucks, the inhabitants have a unsafe feeling at the streets. The people are getting used to aggressive and fast driving.

Rotterdam is a car-friendly city, but there should be more focus on safety.

SCALE : 1/10.000

Intensity

Legend

- Very intensive
- Intensive
- Slightly intensive

The roads that are used the most in the neighborhood are the roads that are broad and very car-orientated. There is no determined space for bicycles and it's not a residential area where children safely can play on the roads and cars are driving slow.

Comparison of Violence & Vacancies

Areas of high violence and vacancies to areas of low violence and few vacancies.

Although there are two blocks which experience high levels of both factors in genveral a high level of vacancies does not appear to contribute to an increase in reported violence.

Social Network

Legend

- Long Stay Dutch
- Long Stay Immigrante
- Artist
- Short Stay people

Social network is a social structure which construct by individual person or groups that tied by different types of relationship, such as family, kinship, friendship, colleague schoolmate, trade or same religion, values and ideas. It can be seen as a map to show all of the relevant ties between people and groups in our sociality and the network can also be used to determine the social capital of individual actors. In Oud-Charlois, there is strong social network within 4 groups(Dutch, Immigrate, Artist and short stay people), but the mix living lead culture conflict. People percept unsafety and social segregation are becoming a serious social peoblem and affect the community.
